

### Human/Machine Interface – WELL Sheet

WELL Sheet #: 1032  
Revision: 2021/11

<b>Date:</b>		<b>Job:</b>		<b>:</b>		
Observation team member:				Signature:		
Observation team member:				Signature:		
Observation team member:				Signature:		
<b>Location of Work:</b>				<b>Yes</b>	<b>No</b>	<b>N/A</b>
1.	Where close proximity to vehicular and Heavy Equipment traffic exists for our workers, we have ensured that our workers are protected from these congested work environments by appropriately managing the pedestrian – vehicle/heavy equipment interface, via back-up alarms, flaggers, appropriate swing radius, barricades, safe pedestrian zones, etc. Ground workers working near heavy equipment are wearing "high visibility" outer layer vest/shirt and are carrying an audible signaling device (e.g. whistle or horn).					
2.	Workers understand they must stay clear of blind spots and maintain line-of-sight with vehicle/heavy equipment operators, where applicable, to mitigate exposure.					
	<b>NOTE:</b> Consult with Total Health & Safety (Safety Specialist) and/or other SME(s) as necessary to verify these criteria.
